

Responsibility for the quality of processes and products is a topic we take very seriously at TBH.

All certificates emitted so far need to be updated by the end of 2018. The current version of ISO 9001 deepens basic standards even further – particularly those ones concerning process approach. Claims concerning chance and risk management as well as knowledge management have been added. For the first time ever, the analysis and evaluation of possible chances and risks along the value or supply chain becomes obligatory. Besides, a well-structured knowledge management is demanded which is to collect and store process-relevant knowledge and which shall make it available and accessible to all employees needing it. With this new certification, TBH assumes a leading role.

Press release

ISO 9001:2015

Certification successfully completed

STRASBOURG – Responsibility for the quality of processes and products is a topic we take very seriously at TBH. Among other things, the fact that TBH is one out of few companies already certified by the new ISO 9001:2015 standard, the most important standard for quality management systems, pretty lucidly documents this dedication. All certificates emitted so far need to be updated by the end of 2018. The current version of ISO 9001 deepens basic standards even further – particularly those ones concerning process approach. Claims concerning chance and risk management as well as knowledge management have been added. For the first time ever, the analysis and evaluation of possible chances and risks along the value or supply chain becomes obligatory. Besides, a well-structured knowledge management is demanded which is to collect and store process-relevant knowledge and which shall make it available and accessible to all employees needing it. With this new certification, TBH assumes a leading role.

Caption: ISO 9001:2015

Since 1985, TBH GmbH has been committed to the creation of healthy workplaces that are free of harmful gases, contaminants and dust. Our filter and extraction systems are used in a wide range of production processes to protect people, the environment and the machinery. Our products meet the highest quality standards and have the required certifications to match the industrial and medical sectors. Whether for constant industrial demand, or for the right solution for every situation or filter replacement – available.
