TECHNOLOGY

MULTIPLE
VIEWING
MODES

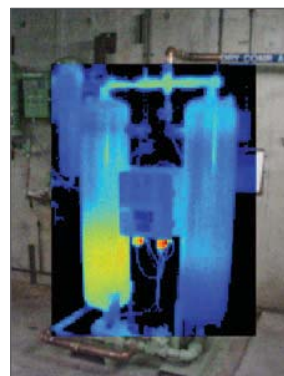

DON'T BE FOOLED
BY IMITATORS

AUTOBLEND™
IDENTIFIES
PROBLEM
AREAS FASTER

MORE THAN
PICTURE-IN-PICTURE

Full infrared: Displays a full screen infrared view for maximum infrared detail.

Picture-in-picture: Maintains a frame of reference by placing an IR "window" within a digital image.

AutoBlend™ mode: Only Fluke has mastered the ability to blend partially-transparent infrared and digital images for easier problem detection.

Infrared images alone can be difficult to understand, which is why Fluke pioneered IR-Fusion® technology. Fluke IR-Fusion technology is the industry's only pixel by pixel alignment of digital and infrared images, providing the highest level of clarity and accuracy in the industry. Others have tried to copy, but no one has matched this powerful feature. Turn to Fluke patented IR-Fusion technology to deliver the industry's best infrared images.

NEW!

Two additional models announced...
