Tektronix DMM4050 and DMM4040 Data Sheet

DMM4050

Features & Benefits

Key Performance Specifications

- 6.5 Digit Resolution
- Basic VDC Accuracy of up to 0.0024% (1 yr.)
- 100 mV to 1000 V Voltage Range, with up to 100 nV Resolution
- 100 μ A to 10 A Current Range, with up to 100 pA Resolution
- 10 Ω to 1 G Ω Range, with up to 10 $\mu\Omega$ Resolution
- CAT I 1000 V, CAT II 600 V

Available Functions and Features

- Volts, Ohms, and Amps Measurements
- True RMS (AC, AC + DC) Measurements
- Diode and Continuity Testing
- Frequency and Period Measurements
- Temperature and Capacitance Measurements (DMM4050)
- 2x4 Ohms 4-wire Measurement Technique
- TrendPlot™ Paperless Data Recorder Mode
- Measurement Statistics
- Histogram Mode

Connectivity

- Front and Rear 2x4 Measurement Inputs
- USB Host Port on Front Panel for Easy Storage of Measurement Data and Instrument Settings
- RS-232, LAN, and GPIB Ports on Rear Panel for Quick PC Connectivity
- Includes USB to RS-232 Interface Adapter Cable
- Includes National Instrument's LabVIEW SignalExpress™ TE Limited Edition for Connecting Your Bench

3-year Warranty

Feature-Rich Tools for Precision Measurements

As the circuits in embedded system designs become more sophisticated with tighter tolerances, you must measure a multitude of different parameters with a high degree of accuracy to validate your design. The Tektronix DMM4050 and DMM4040 6.5 digit bench multimeters pack many different functions and analysis into one instrument, all with exceptional precision and performance.

Typical multimeter measurements – volts, ohms, and amps – are made with a basic VDC accuracy of up to 0.0024%, and resolution of 100 pA and 10 $\mu\Omega$, ensuring you have the performance you need for today's demanding designs. You can also use the DMM4050/4040 to measure frequency and period, and to perform continuity and diode tests. For additional flexibility, the DMM4050 offers temperature and capacitance measurements. This allows you to replace your temperature meter, capacitance meter, counter, continuity tester, and traditional DMM with one versatile instrument, saving bench space and cost.

Analyze Your Device with Graphical Display Modes

With the unique dual display of the DMM4050/4040, you can measure two different parameters of the same signal from one test connection. To reveal signal quality issues like drift, intermittent transients, and stability, you can view the data as a real-time trend plot or a histogram with the DMM4050/4040's graphical display mode, or you can use measurement statistics to track how signal parameters are changing over time.

TrendPlot™ Paperless Recorder Mode

Depending on your test case, your signal parameters may change from instant to instant. By taking multiple measurements over minutes, hours, or days, you can quantify those changes. With TrendPlot™, you can graphically plot the trend of a measured value over time, from short time spans to extended periods of time. TrendPlot can be used with measurements like DC voltage, DC current, frequency, resistance, and temperature. AC voltage and current can be plotted as RMS measurements.

Histogram display.

Measurement Statistics

With integrated statistics processing, you can calculate both the average and standard deviation of a measurement, as well as track the minimum and maximum measured values, with the push of a button. Statistics can be performed on DC voltage, AC voltage, AC voltage in dB, DC current, AC current, resistance, capacitance, frequency, period, and temperature measurements.

Histogram Plots

To graphically see the average and standard deviation of a set of measurements, you can use the histogram function to see the distribution of measurement results.

Designed to Make Your Work Easier

The DMM4050/4040 multimeter is designed with the ease of use and familiar operation you expect from Tektronix.

Intuitive Operation

Dedicated front-panel buttons provide fast access to frequently used functions and parameters, reducing setup time. You no longer need to search through software menus to find the function you need.

Dual Display

With the unique dual display, you can measure two different parameters of the same signal from one test connection.

Easy Data Storage and PC Connectivity

A USB port on the front panel makes it easy to store measurement data and instrument setups to a memory stick. Or connect to your PC with the LAN, RS-232, or GPIB port on the back panel. A USB to RS-232 interface adapter cable is included standard with the DMM4050/4040 to make it easy to connect to your PC's USB port.

Simple and Accurate 4-wire Measurements

Patented split terminal jacks for the 2×4 ohms function allow you to perform 4-wire measurements using only two leads instead of four. Special test lead accessories are available to enable you to establish the connection. You get excellent resolution and accuracy plus the convenience and ease of using a single pair of leads.

Connect Your Bench for Intelligent Debug

Easily capture, save, and analyze measurement results from your multimeter with the special Tektronix Edition of National Instrument's LabVIEW SignalExpress™ software. Every DMM4050 and DMM4040 ships with a free copy of the Limited Edition version of SignalExpress for basic instrument control, data logging, and analysis. The optional Professional Edition offers over 200 built-in functions that provide additional signal processing, advanced analysis, sweeping, limit testing, and user-defined step capabilities.

SignalExpress supports the range of Tektronix bench instruments*1, enabling you to connect your entire test bench. You can then access the feature-rich tools packed into each instrument from one intuitive software

interface. This allows you to automate complex measurements requiring multiple instruments, log data for an extended period of time, time correlate data from multiple instruments, and easily capture and analyze your results, all from your PC. Only Tektronix offers a connected test bench of intelligent instruments to simplify and speed debug of your complex design.

Performance You Can Count On

In addition to industry-leading service and support, every DMM4050 and DMM4040 multimeter comes backed with a three-year standard warranty.

*1 NI LabVIEW SignalExpress supports the following Tektronix instruments: MSO/DPO4000/3000/2000 Series oscilloscopes, TDS3000C/2000B/1000B Series oscilloscopes, AFG3000 Series arbitrary/function generators, DMM4050/4040/4020 Series digital multimeters.

Environment

Characteristic	Description
Temperature	
Operating	0 °C to 55 °C
Storage	–40 °C to 70 °C
Warm Up	1 hour to full uncertainty specifications
Relative Humidity (noncondensing)	
Operating	<90% (0 °C to 28 °C) <80% (28 °C to 40 °C) <50% (40 °C to 55 °C)
Storage	<95% (–40 °C to 70 °C)
Altitude	
Operating	2,000 meters
Storage	12,000 meters
Vibration	Complies with Mil-T-28800F Type III, Class 5 (Sine only)
Safety	Designed to comply with IEC 61010-1:2000-1, UL 61010-1A1, CAN/CSA-C22.2 No. 61010.1, CAT I 1000V / CAT II 600 V
EMC	Designed to comply with IEC 61326-1:2000-11 (EMC) when used with shielded communications cables. This meter has shown susceptibility to radiated frequencies greater than 1 V/m from 250 to 450 MHz

Triggering

Characteristic	Description
Samples per Trigger	1 to 50,000
Trigger Delay	0 s to 3600 s; in 10 µs increments
External Trigger Delay	<1 ms
External Trigger Jitter	<500 µs
Trigger Input	TTL Levels
Trigger Output	5 V max (open collector)

Memory

Model	Description
DMM4050/4040	10,000 measurements, internal, and up to 2 Gigabyte capacity with USB memory module (available separately) through front-panel USB port

Math Functions

Zero, dBm, dB, MX+B, Offset, DCV ratio and TrendPlot, Histogram, Statistics (min/max/average/standard deviation), and Limit Test

Electrical Specifications**DC Voltage Specifications**

Accuracy specifications are valid for 6½ digit resolution mode after at least a 1 hour warm-up with Auto Zero enabled.

24-hour specifications are relative to calibration standards and assume a controlled electromagnetic environment per EN 61326-1:2000-11.

Characteristic	Description
Maximum Input	1000 V on any range
Common Mode Rejection	140 dB at 50 or 60 Hz $\pm 0.1\%$ (1 k Ω unbalance)
Normal Mode Rejection	60 dB for NPLC of 1 or greater with analog filter off and power line frequency $\pm 0.1\%$ 100 dB for NPLC of 1 or greater with analog filter on and power line frequency $\pm 0.1\%$
Measurement Method	Multiramp A/D
A/D Linearity	0.0002% of measurement + 0.0001% of range
Input Bias Current	<30 pA at 25 °C
Auto-zero Off Operation	Following instrument warm-up at calibration temperature ± 1 °C and less than 10 minutes, add error: 0.0002% range additional error +5 μ V
Analog Filter	When using the analog filter, specifications are relative to within one hour of using the ZERO function for that range and NPLC setting
DC Ratio	Accuracy is $\pm$ (Input accuracy + Reference accuracy), where Input accuracy = DC Voltage accuracy for the HI to LO Input (in ppm of the Input voltage), and Reference accuracy = DC Voltage accuracy for the HI to LO (Sense) Reference (in ppm of the Reference voltage)
Settling Considerations	Measurement settling times are affected by source impedance, cable dielectric characteristics, and input signal changes

Frequency

Characteristic	Description
Gate Time	Programmable to 1 s, 100 ms, and 10 ms
Measurement Method	Flexible counting technique. AC-coupled input using the AC voltage measurement function
Settling Considerations	When measuring frequency or period after a DC offset voltage change, errors may occur. For the most accurate measurement, wait up to 1 second for the input blocking capacitor to settle
Measurement Considerations	To minimize measurement errors, shield inputs from external noise when measuring low-voltage, low-frequency signals
